

Week 2 In Review

This week was a really great week! I was so excited to start using JavaScript and it went very smoothly. I feel very confident with the work that I have submitted this week. It came much more naturally to me than C# did. I did a lot of research this week, both required and supplemental. I found W3schools.com and stackoverflow.com very helpful this week. This week I didn't have much peer interaction, besides reading the summary Anchor Points, I feel really good with my progress, because it seems to be matching up with the peers that have posted their summaries.

Last week I expressed my challenges as being time management with my children and family. This week I have done great overcoming that challenge. I had a lot of work done by the very beginning of the week, and completed my weeks work by the middle of the week. I was able to stay on task and was very intrigued by JavaScript.

My biggest challenge for the weeks to come, will still of course be time management but also retaining the knowledge that I gain in my research and being able to display that in my JavaScript assignments. I am excited to face these challenges and hopefully overcome them like I did this week.

My goals for next week are just that, to overcome my challenges and continue feeling confident and excited by JavaScript. I want to continue to do extra research on my own and go above and beyond in my assignments.
